GCTOF Primary Profiling Analysis

Sample Type: human blood

Sample Total: 48 (plus 7 duplicates)

Treatments: 1

These are samples from the same individual taken over the course of 18 months. We are interested in comparing these results to other measurements from the same individual, including RNA-seq and brain imaging.

Collection Method:

The whole blood was separated using Ficoll gradient.

Interest: N/A

Note: 7 duplicates were sent and the client does not want them run, they are extras
