

## LC-MS/MS analysis of amino acids and amino metabolites

Targeted profiling of amino acids and amino metabolites was conducted at the Mayo Clinic by LC-MS as previously described<sup>53,54</sup>. Briefly, either 20 µL of plasma samples or 5 mg of tissue homogenates were spiked with an internal standard solution consisting of isotopically labeled amino acids (U-<sup>13</sup>C<sub>4</sub> L-aspartic acid, U-<sup>13</sup>C<sub>3</sub> alanine, U-<sup>13</sup>C<sub>4</sub> L-threonine, U-<sup>13</sup>C L-proline, U-<sup>13</sup>C<sub>6</sub> tyrosine, U-<sup>13</sup>C<sub>5</sub> valine, U-<sup>13</sup>C<sub>6</sub> leucine, U-<sup>13</sup>C<sub>6</sub> phenylalanine, U-<sup>13</sup>C<sub>3</sub> serine, U-<sup>13</sup>C<sub>5</sub> glutamine, U-<sup>13</sup>C<sub>2</sub> glycine, U-<sup>13</sup>C<sub>5</sub> glutamate, U-<sup>13</sup>C<sub>6</sub>, <sup>15</sup>N<sub>2</sub> lysine, U-<sup>13</sup>C<sub>5</sub>, <sup>15</sup>N methionine, 1,1U-<sup>13</sup>C<sub>2</sub> homocysteine, U-<sup>13</sup>C<sub>6</sub> arginine, U-<sup>13</sup>C<sub>5</sub> ornithine, <sup>13</sup>C<sub>4</sub> asparagine, <sup>13</sup>C<sub>2</sub> ethanolamine, d3 sarcosine, d6 4-aminobutyric acid). The supernatant was immediately derivatized with 6-aminoquinolyl-N-hydroxysuccinimidyl carbamate using a MassTrak kit (Waters). A 10-point calibration standard curve underwent a similar derivatization procedure after the addition of internal standards. Both derivatized standards and samples were analyzed on a Quantum Ultra triple quadrupole mass spectrometer (ThermoFischer) coupled with an Acquity liquid chromatography system (Waters). The LC gradient is shown in Table 6. Buffer A was 0.1% formic acid, 1% Acetonitrile, 99% Water and Buffer B was 1% water, 99% Acetonitrile. Data acquisition was conducted by using selected ion monitoring (SRM) in positive ion mode using transitions shown in Table 7. Concentrations of 42 analytes of each unknown were calculated against their respective calibration curves.

Table 6. LC-MS gradient program

Time	%A	%B	Flow (mL/min)
initial	99.9	0.1	0.400
1.00	99.9	0.1	0.400
2.00	99.9	0.1	0.400
5.50	98.1	1.9	0.400
6.50	98.0	2.0	0.400
10.00	97.5	2.4	0.400
12.00	96.0	4.0	0.400
20.00	88.0	12.0	0.400
27.00	86.5	13.5	0.400
31.00	80.0	20.0	0.400
32.00	2.0	98.0	0.500
35.00	2.0	98.0	0.500
35.50	99.9	0.1	0.400
39.00	99.9	0.1	0.400
