## Explanations

**Bruker IVDr Lipoprotein Subclass Analysis B.I.LISA™** has been developed for analysis of spectra from human plasma or serum samples acquired on base of Bruker's preparation and measurement SOPs.

**Bruker IVDr Lipoprotein Subclass Analysis B.I.LISA™** uses regression models to predict the concentration of the parameters listed in this report. The regression models were established on base of training data combining NMR spectroscopy data and ultracentrifugation based data. Listed parameters are in part highly correlated.

Incompliance to Bruker's NMR preparation and measurement SOPs may result in major errors in the concentrations determined by **Bruker IVDr Lipoprotein Subclass Analysis B.I.LISA™**.
